

Cuba Block 9: Operations Update

12 March 2024

Highlights

- Upper Alameda “N” sheet reservoir reached, currently at 3045mMD and drilling ahead.
- Forward plan is to continue to drill 8 ½” hole through the Alameda reservoir to next casing point: in seal above the Marti reservoir (~3586mMD).
- High-pressure gas separator dispatched to drill pad (see below).
- The separator is integral to testing the deep Alameda and Marti reservoirs once total depth of the well is reached.
