

Cuba Block 9: Alameda-3 Drilling Update

29 February 2024

Highlights

- Section Total Depth (TD) called at 2860mMD in seal above Alameda reservoir.
- Currently preparing to undertake wireline logging in open hole.
- Once logging is complete 9-5/8" casing will be cemented into hole section.
- Testing of 10,000 psi Blow Out Preventer (BOP) will be performed prior to 8" drilling.
- After setting and testing casing, plan is to drill ahead through Alameda reservoir to next casing point in seal above the Marti reservoir (~3586mMD).
