

Cuba Block 9: Operations Update

31 May 2024

Highlights

- Drilling progressing well.
- 9 metres of Marti reservoir core cut; core samples of good quality.
- Oil sheen observed over shakers.
- Forward plan is to drill to total depth (for the section as well as the well) at about 3835mMD, wireline logs will be acquired in the 6" hole before a 4-1/2" slotted liner is run.
- Flow testing of the Marti sheet is on schedule to commence as early as the end of next week. following which it will be isolated so flow testing of the Alameda sheet may follow.
- Work continues on engineering, joint marketing, storage, transport and export studies.
